

## Graffiti Removers

For use before you apply a graffiti protection coating (to remove current graffiti) and after use once graffiti is applied over the coating.

Coo-Var graffiti removers are available in three forms to best suit your need or preferred method, and all are easy to use:

- **Gel** – slightly mild in its action
- **Liquid** – more tough on graffiti
- **Wipes** – for easy removal of small amounts of graffiti

Not for use with GP101.

## TECHNICAL INFORMATION

PRODUCT	SUITABLE SURFACES	TIN OR PACK SIZE	COVERAGE	DRY TIME	FINISH	NOTES
GP101	Brick, Concrete/Render, Sandstone. May also be suitable for Plastics, Uncoated Metals and New Gloss Paint (ask for more information)	2.5 litre and 5 litre	8 sqm per litre	1-2 hours Can re-coat after 4 hours (Min.)	Gloss or Matt	Do not clean graffiti off GP101 using solvents.

## Wash off graffiti with water

### GP101 Graffiti & Flyposting Protection System

This single pack system is a clear coating which offers long term protection against both graffiti and flyposters.

With this coating being fast drying, it allows you to apply two coats in one day. This means your contractor bill is reduced as well as reducing the chances of a graffiti attack between coats.

With GP101 there is no need to wait until there is enough graffiti to make it worth calling in a contractor to remove it. If a little graffiti occurs it is safe and easy enough to remove it yourself. This can save a lot of money as well as making your property look better because the graffiti is there for less time. Simply clean with water and scrubbing brush or pressure washer.

- Save money by not having to buy solvents
- Save money by washing off graffiti 'in-house'
- Less 'ghosting' remains
- Gloss and matt finishes available
- Fast drying – apply two coats in the same day
- Can be applied to rough or smooth surfaces
- Flyposters do not stick properly and just peel off

**Note:** Do not clean graffiti off this coating using solvents as this will hinder GP101's performance. Use either water or warm soapy water (e.g. with washing up liquid). Read guidance notes before using GP101 - available from the Coo-Var website.

**The  
SIMPLE EFFECTIVE  
Solution**

Whether on private or public land, graffiti is a big issue in all our towns and cities. Repainting after each attack costs a lot of money and takes a long time, therefore protecting ourselves first place is a logical step.

Coo-Var have over 100 years experience manufacturing specialist paints for most situations and now have a number of products to protect surfaces from graffiti so that when it does occur a small amount of cleaning is required rather than repainting work.

### GP101 Sealer Coat

For porous surfaces, GP101 Sealer Coat is likely to be needed before GP101 Graffiti Protection System is applied.

This is a transparent sealer which will also offer excellent water and mildew resistance on porous surfaces, is acrylic and free of volatile organic solvents. This results in it being low odour, non flammable and low toxicity.

The sealer coat can also be used to further minimise the darkening of sandstone and other natural stone products.

This brochure takes you through Coo-Var's anti-graffiti products, where they are best to be used, how to use the system and their technical information (back page). At any point in your decision or even after the coating is applied, you can call Coo-Var Technical Services to get advice and to answer any questions you may have – 01482 328053.

All Coo-Var Anti-graffiti systems are clear and hard-wearing. There is a suitable application for all places, both inside and outside.

### P101 Anti-graffiti Coating

Coo-Var P101 is a two pack, clear aliphatic polyurethane coating which provides a highly graffiti-resistant finish.

This coating has good chemical resistance making it easy to clean and durable. Will not fade or yellow when exposed to high levels of Ultra Violet light, or support the growth of fungus.

This coating dries to a clear, gloss finish and is particularly suitable for outdoor use but can also be used indoors.

P101 is suitable for many surfaces, but is not for use over conventional solvent based paints (ask our Technical Services department if in doubt).

### P101 Brushwash/Thinners

Thinners for use with P101 are also available from Coo-Var in 500ml and 5 litre tins.

**NOTE:** Always read the instructions as well as health & safety information before applying any coating.

## Conventional Hard Glaze Coatings

### WB101 Anti-graffiti Coating

Coo-Var WB101 is a two pack, water based, polyurethane coating which acts as a sealer (reducing absorbency), allowing the removal of graffiti with solvent based products (see Graffiti Removers section) and easy cleaning for hygiene reasons.

Being water based, this coating is low odour. This is usually important within indoor environments such as hospitals, schools and other public buildings.

Dries to a clear, off-gloss finish.

**Water Based**

### Anti-graffiti Kit

An easy, no fuss way to get a complete anti-graffiti kit with all the equipment you will need to apply it.

#### Kit Contains:

- WB101 two pack unit (2.5 Litre mixed unit)
- Paint brush
- Mixer paddle
- Gloves
- Instructions
