

Step Lift Bespoke

A built to specification step lift that can be configured according to the building layout and architectural design.

The different options include a flight of steps/stairs with a platform at the upper level or lower level. When activated the steps/stairs fold to a flat surface. Or steps that transforms into a platform lift when the system is activated. This product eliminates the need for an upper or lower platform.

Step Lift Bespoke

Standard Features

Indoor or outdoor installation
Automatic 100mm roll off protection (step side)
Automatic landing fall protection (900-1100mm high)
Hold to run on board controls including stop button
